Objectives

I am always seeking new challenges and opportunities to further develop my skills, and I am committed to staying up-to-date with the latest advancements in technology.

Education

Open University of Ho Chi Minh City, BSc in Management Information System 2016 – 2020

Coursework: Enterprise Resources Planning Theory, Database & Systems Analysis and Design.

VnPro, CCNA Training Program

01/2021 – 04/2021

Coursework: Network Fundamentals, Routing and Switching.

Experience

Module Technician, Manufacturing Industry – Ho Chi Minh City, Viet Nam Dec 2025 – May 2026

- Managed test equipment and hardware, ensure optimal functionality and availability;
- Developed advanced processes for handling equipment, while establishing clear process requirements and specifications;
- Assessed, improved, and optimized processing techniques and methods used in high-volume manufacturing settings, ensure safety and quality standards are met;
- Followed cannibalized process. Provided the inputs, info for Module Engineer to back order;
- Worked with Module Engineer, Technical Supervisor, Equipment Specialist to build the standard for conversion, troubleshooting;
- Provided expert technical support to manufacturing operations, aiding in the resolution of complex issues through comprehensive analysis of variable factors;
- Lead the charge in the adoption and integration of new technologies, ensure seamless transitions;
- Collaborated closely with peers and manufacturing teams to uphold equipment maintenance standards, focus on metrics such as Equipment Mean Time Between Alarm (MTBA), Mean Time to Repair (MTTR), Overall Equipment Efficiency (OEE), as well as drive productivity and automation enhancements.

Sailor, Vietnam's Navy – Khanh Hoa Province, Viet Nam

Feb 2022 – Jan 2024

- Collaborated with other soldiers & people to host and organize local events;
- Maintained and upgraded barracks landscape;
- Managed unit personnel records and documentation;
- Configured, implemented and maintained PCs, laptops, and printers;

IT Specialist, Manufacturing Industry – Ho Chi Minh City, Viet Nam

Jan 2020 – Feb 2022

- Collaborated with other colleagues to host and organize event;
- Trained people in computer system use;
- Maintained and administered network infrastructure, including servers, operating systems, and enterprise applications including Windows Server, Active Directory, and network services;
- Deployed, configured and troubleshooted end-user hardware and peripherals across enterprise environment;
- Diagnosed and resolved hardware, software, and network issues to ensure system availability and performance;
- Monitored and analyzed network & cameras performance to determine whether adjustments are needed and where changes will be needed in the future;
- Contributed to continuous service improvement initiatives;

Projects

InfraWatch – IT Asset & Network Monitoring System

[Source Code](#)

Developed a backend system to manage IT assets and monitor network device health in real-time;

- Designed and developed RESTful APIs using ASP.NET Core for managing IT assets and network devices;
- Built asynchronous processing to handle multiple devices concurrently and improve system performance;
- Applied Dependency Injection and layered architecture (Controller-Service-Repository) for maintainable code;
- Integrated SQL Server with Entity Framework Core for persistent data storage and query optimization;
- Developed logging and audit mechanisms to track system status and operational events;

Technical Skills

Tech Stack: C#, ASP.NET Core, SQL Server, GitHub, Visual Studio, Entity Framework, Background Services.
